Emilia Floor Stand. A helper makes it easier to hold when mounting the stand. Or set the loom on the edge of a table, attach one set of legs, then the other and the cross brace lastly.

**Longer leg** with 2 holes

**Note:** longer leg is on the outside of the ‘X’ frame

- Longer leg with 2 holes
- Shorter leg with 3 holes. Note the short leg ends up on inside next to the loom
- Cross brace attaches here and is at floor level and to the rear of the loom
- Cross brace with bolt and barrel nut shown
- Cross brace assembled to rear leg of ‘X’ frame [note some cross braces have smaller holes for the nut]
- Longer leg of the ‘X’ frame attaches at the bracket. Remove the shorter bolts and replace with longer bolts, supplied.

- Be sure to tap in the head of the carriage bolts so they seat and won’t turn

- Plastic spacer between the two legs
- Attach to front of Emila
- Attaches at the heddle bracket with longer bolts
- Washer
- Loom frame
- Heddle bracket
- Longer leg
- Shorter leg
- Leg
- Tap in or pull in by tightening knob

Loom frame and heddle bracket are shown in the diagram.
Carriage bolt (rounded head with small square shank under. Be sure the square part ‘sinks’ into the wood to keep the bolt from turning. Use a small hammer is need be to tap it in.

Washers typically are placed between the nut (wing nut or knob) and the wood. The threaded portion of the bolt typically points to the outside of the loom or stand or frame.

On the cross piece there generally is no washer. The short (about 1.75 inches) flat headed bolt is used. Line up the slot in the barrel with the bolt when assembling.

The long bolt is about 3 inches long and is used to attach the back legs of the stand to the loom and heddle bracket. The washer is on the outside. Use the black knob to secure the assembly.
