

Emilia Floor Stand. A helper makes it easier to hold when mounting the stand. Or set the loom on the edge of a table, attach one set of legs, then the other and the cross brace lastly.

Attaches to front of Emilia

plastic spacer between the two legs

cross brace attaches here and is at floor level and to the rear of the loom

Attaches at the heddle bracket with longer bolts

Shorter leg with 3 holes. Note the short leg ends up on inside next to the loom

Longer leg with 2 holes

the longer leg of the 'X' frame attaches at the bracket. Remove the shorter bolts and replace with longer bolts, supplied.

note: longer leg is on the outside of the 'X'

be sure to tap in the head of the carriage bolts so they seat and won't turn

Washers typically are placed between the nut (wing nut or knob) and the wood. The threaded portion of the bolt typically points to the outside of the loom or stand or frame

Carriage bolt (rounded head with small square shank under. Be sure the square part 'sinks' into the wood to keep the bolt from turning. Use a small hammer is need be to tap it in

On the cross piece there generally is no washer. The short (about 1.75 inches) flat headed bolt is used. Line up the slot in the barrel with the bolt when assembling.

The long bolt is about 3 inches long and is used to attach the back legs of the stand to the loom and heddle bracket. The washer is on the outside. Use the black knob to secure the assembly.
